TABLE OF CONTENTS

Chapter 1	General introduction and outline of this thesis	9
PART 1	METABOLISM OF ARGININE, GLUTAMINE AND CITRULLINE AROUND SURGERY AND CRITICAL ILLNESS	29
Chapter 2	Preoperative oral nutritional interventions in surgery, including arginine and glutamine-enhanced supplements.	31
Chapter 3	Evaluation of a new concept of immune-enhancing diet in a model of head-injured rat with infectious complications: a proof of concept study.	55
Chapter 4	Enteral glutamine administration in critically ill non-septic patients does not trigger arginine synthesis: a quantitative study.	75
Chapter 5	Intravenous glutamine supplementation enhances renal de novo arginine synthesis in humans; a stable isotope study.	97
Chapter 6	Perioperative intravenous glutamine supplementation restores the disturbed arginine synthesis after ischemia-reperfusion injury caused by open abdominal aortic surgery, a randomized controlled clinical trial	113
PART II	IMPLICATION OF ARGININE-ADMA-NO PATHWAY IN THE DISEASED STATE	135
Chapter 7	General introduction of Part II	137
Chapter 8	Asymmetric dimethylarginine (ADMA) and critical illness.	145
Chapter 9	The arginine/ADMA ratio is related to the prevention of atherosclerotic plaques in hypercholesterolemic rabbits when giving a combined therapy with atorvastatine and arginine.	159
Chapter 10	Strict glucose control and artificial regulation of the NO–ADMA–DDAH system in order to prevent endothelial dysfunction.	175
Chapter 11	Summary, discussion, general conclusion and future perspectives	181
Chapter 12	Nederlandse samenvatting	199
	Curriculum vitae	205
	List of publications	211
	Dankwoord	215
